**NOTE.**—Many Nurserymen are offering Budded Apples as well as grafted Budding of apple is more practiced of late owing to scarcity of clion for grafting, such as Wagner, Teifofsky, Yellow Newtown Pippin, Alexander, Buckingham, Shannon Pippin, Primate, Bismarck, Jersey Sweet, Lady and several others of short or medium growth, are more vigorous budded than grafted. Scarcity of such varieties of McIntosh, Esopus, Spitzenburg, Rome Beauty, Winter Banana, Stayman's Winesap, Fall Pippin, Baldwin, Red June, Red Astrachan, Livland Raspberry and Duchess of O. are being budded to increase faster than by grafting or where a variety partially failed in grafting stand. Many nurserymen are grafting Northern Spy on light stocks and budding the yearling growth to slow growth varieties which is proving very satisfactory, has also the advantage of being budded very late, after peach budding, and as Northern Spy is considered almost aphid proof, is a very desirable stock. We would also recommend using Kinnaird's Choice as a stock the same way, this variety makes excellent stands, the grafting uniting very readily and is least subject to root knot, crown gall and aphid. This method has the advantage of requiring very little sprouting in the spring after cutting back to bud, making it as cheap as using No. 3 seedling, saving the sprouting of several times in its favor. Try budding some apple this season.
